

CS1103

Introduction to Databases

Lecture 10

JDBC

Learning Objectives

By the end of this module, you will be able to:

- Write Java programs that include JDBC code to:
 - Connect to your database
 - Execute SQL statements
 - Execute stored procedures
- Includes both text-based and JavaFX GUI programming

What is JDBC?

Java Database Connectivity

- Enables Java programs to interact with a database
- Provides the "glue" so Java + MySQL = Information System
- Consists of Java classes we can use in our programs

A First Example

```
$ setenv CLASSPATH .\:/usr/share/java/mysql-connector-java.jar
$ java AddHotel
Enter the new hotel id: 1004
Enter the new hotel name: Hotel 1103 Fredericton
Enter the new hotel address: 1 Queen Street
Insertion succeeded
$
```

Hotel	
PK	<u>Hotel Id</u>
	Hotel Name Hotel Address

[AddHotel.java](#)

Mapping Java to SQL Data Types

SQL Data Type	Java Data Type	PreparedStatement Methods	ResultSet Methods
int	int	setInt	getInt
decimal	float, double, java.math.BigDecimal	setFloat, setDouble	getFloat, getDouble, getBigDecimal
varchar	String	setString	getString
date	java.sql.Date, ** String	SetDate, setString *	getDate
datetime	java.sql.TimeStamp, String	setTimestamp, setString *	getTimestamp

* Depends on which type of value is more convenient to create in your Java program

** java.sql.Date and java.util.Date are different classes

Calling a Stored Procedure from Java

```
$ java CheckOut
```

```
Enter the id of the stay to be checked out: 10977
```

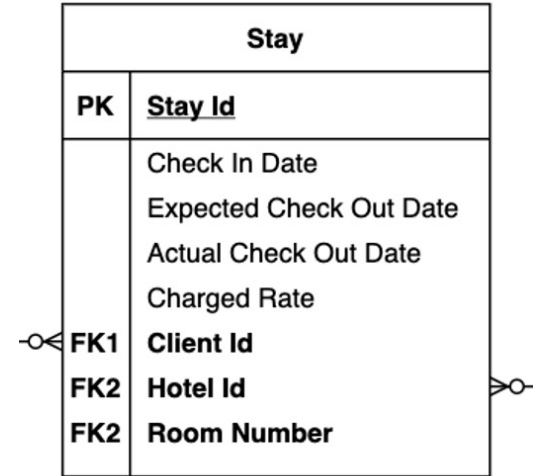

```
Check out succeeded
```

```
$
```

View in a text editor:

`checkOut.sql`

`CheckOut.java`

Processing Query Results

```
$ java ListClientNames
```

```
Client Names
=====
Herb Tarlick
Lois Jones
Sue Moore
Ted Danilo
=====
```

```
$
```

Client		
PK	<u>Client Id</u>	++
	Client Name	
	Home Address	
	Client Email	++

`CheckIntoHotel.java`

Listing Rooms in a Hotel

```
[andrewm@id414m16 hotel]$ java RoomList

(r)oom list or (q)uit? r

Enter the hotel id: 1001

Displaying rooms for: Hotel 1103 Toronto Airport

Room          Room Type
=====
101  Two-Queen Standard
102  Two-Queen Standard
103  Two-Queen Standard
201  King Standard
202  King Standard
203  King Standard
=====

(r)oom list or (q)uit? r
```

```
Enter the hotel id: 1003
```

```
Displaying rooms for: Hotel 1103 Vancouver
```

Room	Room Type
101	Two-Queen Standard
102	Two-Queen Standard
103	Two-Queen Standard
201	King Standard
202	King Standard
203	Deluxe Suite
